EDUCATION

Fictional City University | BSc in Financial Engineering

Shanghai, China | 2020.09 - 2024.06

- Studied asset pricing, statistical modeling, and computational finance; used Python, SQL, and Excel in research assignments and case analyses.

EXPERIENCE

Northstar Data Lab | Data Analyst

Shanghai, China | 2024.07 - Present

- Built monthly operating-analysis datasets for consumer and industrial clients, standardizing sales, channel, and inventory definitions into traceable SQL detail tables.
- Cleaned multi-source transaction records with Python, identified unusual movements, and drafted weekly insights that focused project reviews on the highest-priority questions.

Harborline Systems | Business Analytics Intern

Hangzhou, China | 2023.06 - 2024.06

- Contributed to subscription-retention analysis by organizing customer lifecycle, feature-usage, and support-tag data into practical segmentation views for quarterly reviews.
- Maintained Excel models and presentation templates, replacing manual consolidation steps with parameterized refresh workflows for more consistent cross-team reporting.

Starlane Research Advisory | Industry Research Intern

Beijing, China | 2022.07 - 2022.09

- Organized company disclosures, capacity plans, and public-market data across a fictional clean-energy supply chain into a searchable research workpaper.
- Updated weekly industry charts from interview notes and public sources, checking citations and calculation definitions for analyst discussion materials.

PROJECTS

Retail Demand Signal Platform | Backend Developer

2024.02 - 2024.05

- Designed data models and REST APIs with FastAPI and PostgreSQL for orders, products, and demand signals, supporting queries by category, time window, and store.
- Implemented asynchronous ingestion and aggregation jobs with batch-level status, error, and version tracking; added Redis caching for frequently requested queries.
- Containerized the API, database, and worker services with Docker Compose, then added pytest coverage and GitHub Actions checks for core import and query paths.

Industry Research Knowledge Base | Full-Stack Developer

2023.10 - 2024.01

- Built a Next.js and TypeScript search interface for research materials, with composable filters for keywords, industry, publication date, and tags plus source links and pagination.
- Designed a PostgreSQL schema and Python ingestion scripts for document metadata, summaries, tags, and source URLs, including deduplication and full-text search indexing.
- Implemented server-side validation and audit logging for material uploads, edits, and deletions, with component and API tests for search, pagination, and authorization boundaries.

City Budget Scenario Simulator | Independent Developer

2023.04 - 2023.07

- Developed an interactive budget-simulation web app with Python, Streamlit, and Plotly, exposing population, tax, and public-service assumptions as real-time controls.
- Implemented the budget-calculation module and input-validation rules, clearly separating historical data, user assumptions, and model outputs with readable error handling.
- Built scenario-comparison charts and CSV export, documented local deployment, and managed versions with Git so others could reproduce and extend the simulation logic.

SKILLS AND INTERESTS

- Data and programming: Python (pandas, NumPy, matplotlib), SQL, and Git; comfortable building clear data-cleaning, validation, and reproducible-analysis scripts.
- Languages: Mandarin Chinese (native) and English (professional reading and written communication).
